

**COMPACT HIGH PERFORMANCE+ PANEL
EMERGENCY 3HR 600X600 IP40 4600LM 35W 4000K
NON-DIMM 131LM/W BACKLIT**

Description

This 23W and 3500lm Integral LED High Performance+ panel delivers a uniform Daylight light across the whole of its surface. Its very high level of efficacy (152lm/W) offers savings in running cost against traditional 72W fluorescent fitting as well as many other LED panels.

The panel is fitted with a polycarbonate diffuser that has been tested by a UK based laboratory and passes BS782-0:2004 Method 508A, as required by Fire Safety regulations. Its lightweight steel and PC design, with integrated non-flicker driver, means installation is simple and maintenance is minimal. It is an ideal solution for many applications: office, meeting rooms, corridors, schools/universities and retail premises.
