

COMPACT HIGH PERFORMANCE+ PANEL EMERGENCY 3HR 600X600 IP40 4600LM 35W 4000K NON-DIMM 131LM/W BACKLIT

Description

This 33W and 4600lm Integral LED Performance+ panel with integrated emergency function delivers a uniform cool white light across the whole of its surface. Its very high level of efficacy (139lm/W) offers savings in running cost against traditional 72W fluorescent fitting as well as many other LED panel.

Its lightweight steel, integrated emergency pack and polycarbonate diffuser means installation is simple and maintenance is minimal. With charge indicator and self-test button positioned on the front of the panel it can then be viewed from all angles so continued function can be quickly confirmed. Once installed correctly in the event of mains power failure the panel will continue emitting light (150 lumen output) for a minimum of 3 hours.

All Integral LED emergency panels comply with BS EN 60598-2-22 and comply with designs that require compliance with BS EN 50172:2004.
