

PANEL 600X600 4PACK 2800LM 30W 3000K TPA UGR

Description

This skilfully engineered panel delivers a uniform warm white light across the whole of its surface. Its high level of efficacy (100lm/W) offers savings in running cost against traditional 72W fluorescent fitting as well as other LED panel. This panel is fitted with a polycarbonate diffuser that has been tested by a UK based laboratory and passes BS782-0:2004 Method 508A, as required by Fire Safety regulations.

The diffuser incoroprates a innovative micro prismatic film that helps to control the beam angle and minimize glare so that a Unified Glare Ratio of lower than 19 can be acheived within a lighting design. It is an ideal

solution for many applications such as offices, meeting rooms, corridors, schools & universities and retail premises.
