Recommended Driver ILDRVCV053**

Description

The Integral High Lumen LED strips are designed to produce a brightness of 2350lm/m and to ensure superior consistency in colour temperature and light emission across the strip. The high CRI rating of >90 gives a real, vibrant colour rendering to bring out the true colour in space – including homes, retail, galleries and showrooms. The High Lumen LED strips are suitable for highquality architectural lighting and cove lighting with high ceiling integration. The cuttable marked positions every 66.6mm allow for the creation of custom-designed luminaires using suitable aluminium profiles.
